independent meetings: the Workshop on Synthesis of Concurrent Systems, held in Newcastle upon Tyne as a satellite event of ICATPN/ICACSD and organized by Ph. Darondeau and L. Lavagno, and the Symposium on the Supervisory Control of Discrete Event Systems (SCODES), held in Paris as a satellite event of CAV and organized by B. Caillaud and X. Xie. Synthesis is a generic term that covers all procedures aiming to construct from specifications given as input objects matching these specifications. Theories and applications of synthesis have been studied and

developed for long in connection with logics, programming, automata, discrete event systems, and hardware circuits. Logics and programming are outside the scope of this book, whose focus is on Discrete Event Systems and Supervisory Control. The stress today in this field is on a better applicability of theories and algorithms to practical systems design. Coping with decentralization or distribution and caring for an efficient realization of the synthesized systems or controllers are of the utmost importance in areas so diverse as the supervision of embedded or man

**Events in the City**  
Jan 08 2021 Cities are staging more events than ever. Within this macro-trend, there is another less acknowledged trend: more events are being staged in public spaces. Some events have always been staged in parks, streets and squares, but in recent years events have been taken out of traditional venues and staged in prominent urban spaces. This is favoured by organisers seeking more memorable and more spectacular events, but also by authorities who want to animate urban space and make it more visible. This book explains these trends and outlines

11/23

the implications for public spaces. Events play a positive role in our cities, but turning public spaces into venues is often controversial. Events can denigrate as well as animate city space; they are part of the commercialisation, privatisation and securitisation of public space noted by commentators in recent years. The book focuses on examples from London in particular, but it also covers a range of other cities from the developed world. Events at different scales are addressed and, there is dedicated coverage of sports events and cultural events. This topical and timely volume provides valuable

Events are central to the way that individuals and societies experience life. Even life's inevitable moments—birth, death, love, and war—are almost always a surprise. Inspired by the cataclysmic events of September 11, Robin Wagner-Pacifici presents here a tour de force, an analysis of how events erupt and take off from the ground of ongoing, everyday life, and how they then move across time and landscape.

What Is an Event? ranges across several disciplines, systematically analyzing the ways that events emerge, take shape, gain momentum, flow, and even get bogged down. As an exploration of how events are constructed out of ruptures, it provides a mechanism for understanding eventful forms and flows, from the micro-level of individual life events to the macro-level of historical revolutions, contemporary terrorist attacks, and financial crises. Wagner-Pacifici takes a close look at a number of cases, both real and imagined, through the reports,

personal narratives, paintings, iconic images, political posters, sculptures, and novels they generate and through which they live on. What is ultimately at stake for individuals and societies in events, Wagner-Pacifici argues, are identities, loyalties, social relationships, and our very experiences of time and space. What Is an Event? provides a way for us all—as social and political beings living through events, and as analysts reflecting upon them—to better understand what is at stake in the formations and flows of the events that mark and shape our lives.

### *Critical Event*

*Studies* Mar 22

2022 Within events management, events are commonly categorised within two axes, size and content. Along the size axis events range between the small scale and local, through major events, which garner greater media interest, to internationally significant hallmark and mega events such as the Edinburgh Festival and the Tour de France. Content is frequently divided into three forms - culture, sport or business. However, such frameworks

overlook and depoliticise a significant variety of events, those more accurately construed as protest. This book brings together new research and theories from around the world and across sociology, leisure studies, politics and cultural studies to develop a new critical pedagogy and critical theory of events. It is the first research monograph that deals explicitly with the concept of critical event studies (CES), the idea that it is impossible to explore and understand events without understanding the wider social, cultural and political contexts. It

addresses questions such as can the occupation and reclamation of specific spaces by activists be understood as events within its framework? And is the activity of activists in these spaces a leisure activity? If those, and other similar activities, can be read as events and leisure, what does admitting them into the scope of events management and leisure studies mean for our understanding of them and how the study of events management is to be conceptualised? This title will be of interest to undergraduate and postgraduate students on events management and related courses and

The aim of this control strategy is to adapt the communication over the feedback link to the system behavior. In this thesis, a state-feedback approach to event-based control is extended to systems that are

composed of physically interconnected subsystems. The main concern of this thesis is disturbance rejection in interconnected systems, which is supposed to be best accomplished by a continuous state feedback. This consideration leads to the idea that the event-based state-feedback system should approximate the disturbance rejection behavior of a continuous state-feedback system with adjustable precision. Various methods for the event-based control of physically interconnected systems are investigated. In particular,

decentralized,

distributed and centralized state feedback is studied, which differ with respect to the effort for the communication between the components of the event-based controller over the communication network. The main results concern the design and analysis of event-based state-feedback control methods for physically interconnected systems. For all approaches the disturbance behavior of a continuous state-feedback system is shown to be approximated with adjustable accuracy by the event-based state-feedback system. The novel event-based control methods are tested
